

The logo for TRANS CURE, with 'TRANS' in white and 'CURE' in blue, both in a bold, sans-serif font.

Cracked teeth are bad for patients ... fixing them is good for your practice!

In the hands of your hygienist, this simple diagnostic tool will generate a substantial increase in your restorative procedures ... AND save your patients from undiagnosed fracture sensitivity. Many dentists report that proactive transillumination is so well accepted that it routinely gets patients to schedule crown procedures when transilluminated tooth fractures are shown and accompanied by a detailed explanation of non-treatment consequences!!

Find cracks that are otherwise undetectable!

How else would you be able to detect these cracks? X-ray? Patient complaint? Cold application? And then how would you show the patient? A transilluminated tooth shows up dramatically using your I. O. C.

The logo for KINETIC INSTRUMENTS inc., featuring a stylized 'Ki' in yellow and blue, followed by the text 'KINETIC INSTRUMENTS inc.' in blue.

KINETIC INSTRUMENTS inc.

A white, handheld transillumination tool with a curved metal tip, shown against a light background.

*"Wow, this thing is great! I've tried others ... but **NOTHING** works this well. The color of the light is excellent ... a **VERY** 'white' light. And the intensity is 'just right'. If you don't presently have a **KILLER** transilluminator, give this one a try."*

"New design is fabulous".
